http://meetings.cshl.edu/courses.html

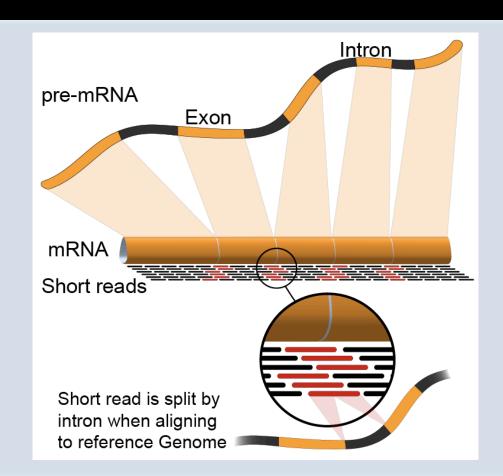

Cold
Spring (s
Harbor
Laboratory

Module 0 Introduction to cloud computing

(slides modified with permission from Francis Ouellette)

Malachi Griffith, Obi Griffith, Jason Walker, Ben Ainscough Advanced Sequencing Technologies & Applications November 11-23, 2014

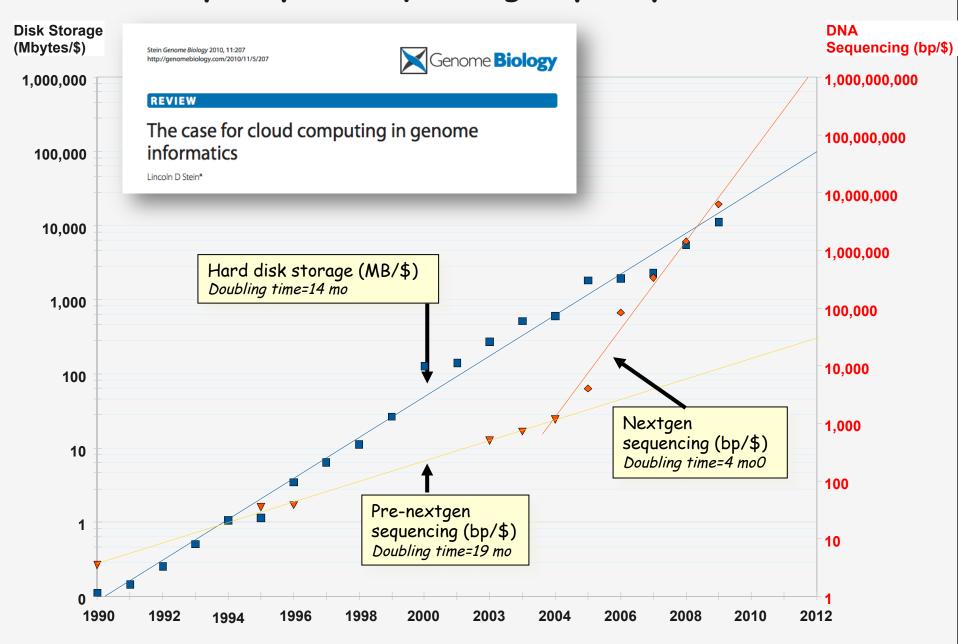

# Learning Objectives of Module

- Introduction to cloud computing
- Use of the wiki in this workshop
- How to log into the cloud

### Disk Capacity vs Sequencing Capacity, 1990-2012

# About DNA and computers

- We'll hit the \$1000 genome during 2013-?, then need to think about the \$100 genome.
- The doubling time of sequencing has been ~5-6 months.
- The doubling time of storage and network bandwidth is ~12 months.
- The doubling time of CPU speed is ~18 months.
- The cost of sequencing a base pair will eventually equal the cost of storing a base pair

# What is the general biomedical scientist to do?

- Lots of data
- · Poor IT infrastructure in many labs
- Where do they go?
- Write more grants?
- Get bigger hardware?

# Amazon Web Services (AWS)

- Infinite storage (scalable): S3 (simple storage service)
- Compute per hour: EC2 (elastic cloud computing)
- Ready when you are High Performance Computing
- Multiple football fields of HPC throughout the world
- HPC are expanded at one container at a time:

http://goo.gl/7PVAl

### Some of the challenges of cloud computing:

- · Not cheap!
- Getting files to and from there
- Not the best solution for everybody
- Standardization
- PHI: personal health information & security concerns
- In the USA: HIPAA act, PSQIA act, HITECH act, Patriot act, CLIA and CAP programs, etc.
  - http://www.biostars.org/p/70204/

### Some of the advantages of cloud computing:

- At the CBW: we received a grant from Amazon, so supported by 'AWS in Education grant award.
- There are better ways of transferring large files, and now AWS makes it free to upload files.
- A number of datasets exist on AWS (e.g. 1000 genome data).
- Many useful bioinformatics AMI's (Amazon Machine Images) exist on AWS: e.g. cloudbiolinux & CloudMan (Galaxy)
- Many flavors of cloud available, not just AWS

# In this workshop:

- Some tools (data) are
  - on your computer
  - on the web
  - on the cloud.
- You will become efficient at traversing these various spaces, and finding resources you need, and using what is best for you.
- · There are different ways of using the cloud:
  - 1. Command line (like your own very powerful Unix box)
  - 2. With a web-browser (e.g. Galaxy): not in this workshop

# Things we have set up:

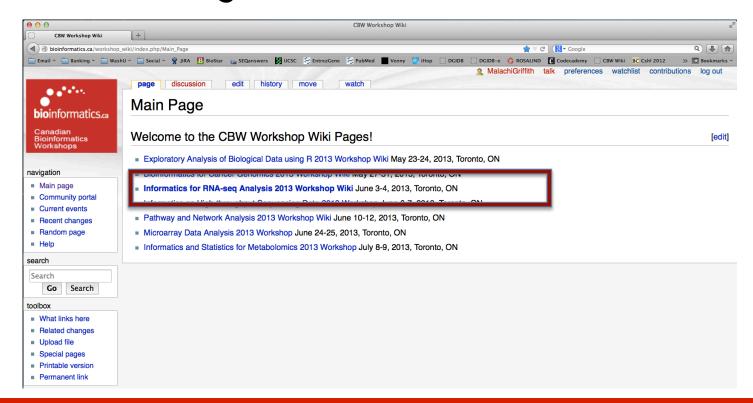

- Loaded data files to an S3 bucket
- We brought up an Ubuntu (Linux) instance, and loaded a whole bunch of software for NGS analysis.
- We then cloned this, and made separate instances for everybody in the class.
- We've simplified the security: you basically all have the same login and file access, and opened ports.
   In your own world you would be more secure.

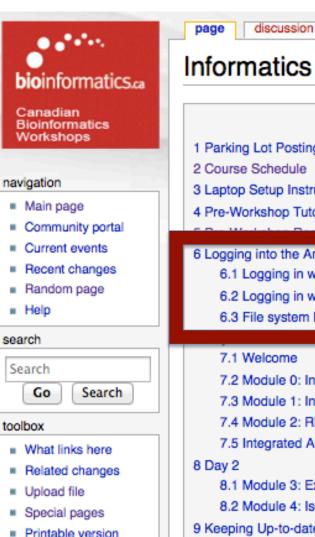

# For this workshop: all on Wiki!

# Obtaining your AWS 'key' file from the wiki

#### Logging into the Amazon cloud

[edit]

- We have set up 40 instances on the Amazon cloud one for each student. In order to log in to your instance, you will need a security certificate.
  - If you plan on using Linux or Mac OS X, please download this certificate.
  - If you plan on using Windows (with Putty and Winscp), please download this certificate.

On Mac: Control+

```
[mgriffit@Malachis-MacBook-Pro-2:cbw]$ ls -la

# Changing file permissions of your 'key' file

ls -l (long listing)

```
drwx----+ 67 francis staff 2278 22 May 21:25 ../
-rw-r--r-@ 1 francis staff 1696 22 May 21:31 CBWRNA.pem
rwx : owner
   rwx : group
    rwx: world
r read (4)
w write (2)
x execute (1)
```

Which ever way you add these 3 numbers, you know which integers were used (6 is always 4+2, 5 is 4+1, 4 is by itself, 0 is none of them etc ...) So, when you have:

```
chmod 600 <file name>
```

It is "rw" for the the file owner only

# Logging in to AWS

#### Logging in

Make sure the permissions on your certificate are secure. Use chmod on your downloaded certificate:

```
chmod 600 CBWRNA.pem
```

To log in to the node, use the -i command line argument to specify your certificate:
Use your assigned student #

```
ssh -i CBWRNA.pem ubuntu@cbw##.ssh01.com
```

(where # is your assigned student number. Your student number is the number on the participant list. If your number less than 10, please add 0 in front of it.)

# Copying files from AWS to your computer

#### Copying files to your computer

To copy files from a node, use scp in a similar fashion (in this case to copy a file called nice\_alignments.bam):

```
scp -i CBWRNA.pem ubuntu@cbw##.ssh01.com:workspace/nice_alignments.bam .
```

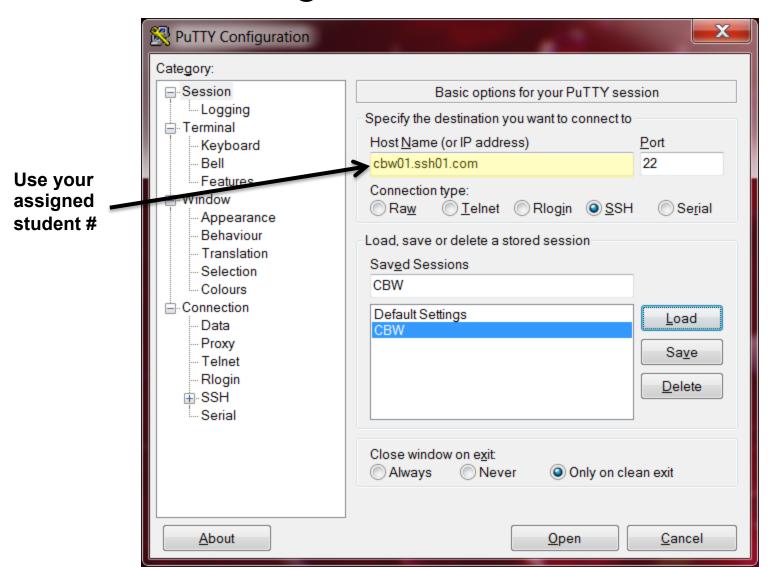

Everything created in your workspace on the cloud is also available by a web server on your cloud instance. Simply go to the following in your browser:

```
http://cbw##.ssh01.com/ ₺
```

# Windows users

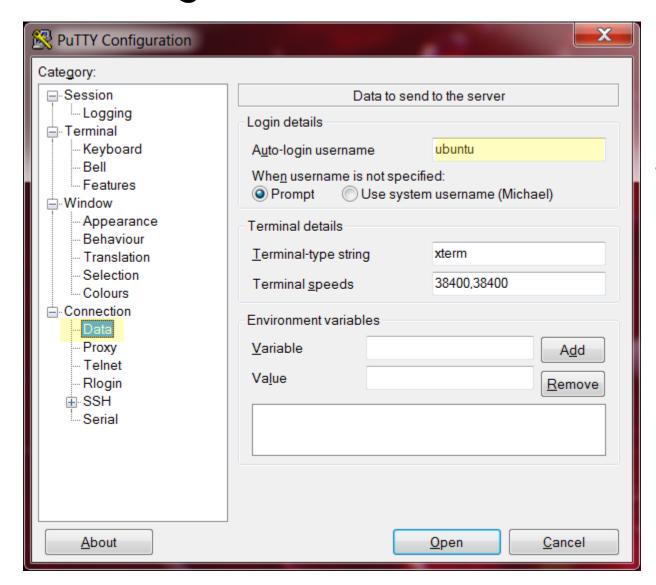

# Putty configuration for windows users

1

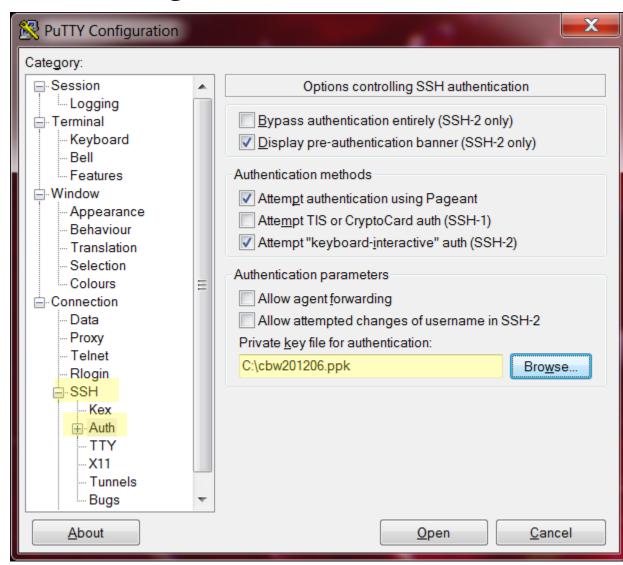

# Putty configuration for windows users

3

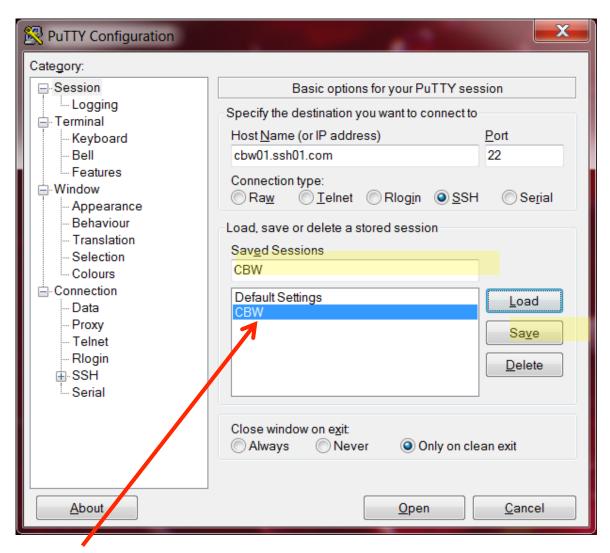

2

# PuTTY configuration for windows users

4

### Putty configuration for windows users

6 7

From now on, just double-click CBW to login.

# So, at this point:

- · Your laptop is ready for the workshop
- If it is not, you know where to get the information you need
- You know how to use the wiki for this workshop
- You know where all of the lectures are
- You have read all of the pre-lecture material
- If not, you know where the papers are, and you are a speed reader
- You know how to login to AWS

# **Break**
